RE: Updates for Jynarque® (tolvaptan) tablet, Rectiv® (nitroglycerin) ointment, Tracleer® (bosentan) tablet, Ravicti® (glycerol phenylbutyrate) liquid, and Revlimid® (lenalidomide) capsule

Prescribers and pharmacists,

Jynarque® (tolvaptan) tablet, Rectiv® (nitroglycerin) ointment, Tracleer® (bosentan) tablet, Ravicti® (glycerol phenylbutyrate) liquid, and Revlimid® (lenalidomide) capsule have been brand preferred for quite some time. **Effective 7/28/2026**, both the generic and the brand products will be available for dispensing to Arkansas Medicaid beneficiaries.

The following generic medications will require DAW code of zero (0) to process the payment at the correct generic rate.

- tolvaptan tablet
- nitroglycerin ointment
- bosentan tablet
- glycerol phenylbutyrate liquid
- lenalidomide capsule

The following brand products will require a DAW code of nine (9) to ensure the claim is processed as a plan prefers brand (PPB) product and pays at the brand rate.

- Jynarque®
- Rectiv®
- Tracleer®
- Ravicti®
- Revlimid®

After 8/31/2026, brand Jynarque®, Rectiv®, Tracleer®, Ravicti®, and Revlimid® will no longer be considered the plan preferred brand product, while the generic will become the preferred option. The overlap of brand and generic will allow pharmacies to exhaust the brand product inventory.

For any questions, contact the Prime Therapeutics Help Desk at 800-424-7895.

Sincerely,

Cynthia Neuhofer, Pharm.D.
