RE: Updates for Remodulin® (treprostiniil) and Natroba® (spinosad)

Prescribers and pharmacists,

Remodulin® (treprostiniil) injection and Natroba® (spinosad) have been brand preferred for quite some time. **Effective 4/1/2026**, both the generic and the brand products will be available for dispensing to Arkansas Medicaid beneficiaries.

Generic treprostiniil and generic spinosad will require DAW code of zero (0) to process the payment at the correct generic rate. Brand Remodulin® and brand Natroba® will require a DAW code of nine (9) to ensure the claim is processed as a plan prefers brand (PPB) product and pays at the brand rate. **After 04/30/2026**, brand Remodulin® will no longer be considered the plan preferred brand product while the generic will become the preferred option. The overlap of brand and generic will allow pharmacies to exhaust the brand product inventory.

Both brand and generic Natroba® (spinosad) will remain as preferred options until further notice.

For any questions, contact the Prime Therapeutics Help Desk at 800-424-7895.

Sincerely,

Cynthia Neuhofer, Pharm.D.  
DMS Assistant Director/Pharmacy Director
